Document disclaimer

- SMBC Nikko Capital Markets Limited and its subsidiaries ("CM-UK", the "Group" or 'we', 'us', 'our') are subject to consolidated supervision by the Financial Conduct Authority ("FCA"). The disclosures set out in this document have been provided in accordance with the disclosure requirements ("Pillar 3 disclosures") established under the 4th Capital Requirements Directive ("CRD IV") and the Capital Requirements Regulation ("CRR"), hereinafter the CRD IV package, which came into effect on 1 January 2014.
- The purpose of the Pillar 3 disclosures, as contained within this document, is to provide sufficient information to enable market participants to assess the risks within the Group.
- This document does not constitute any form of financial statement on behalf of CM-UK.
- This document reflects, where appropriate, information which is contained within the Consolidated Annual Report & Financial Statements of CM-UK.
- The information contained herein has been subject to internal review but has not been audited by CM-UK's external auditors.
- Although Pillar 3 disclosures are designed to provide transparent capital disclosure by banks and investment firms on a common basis, the information contained in this particular document may not be directly comparable with that made available by other firms. This may be due to a number of factors such as:
 - The mix of approaches allowed under the CRR;
 - The mix of exposure types;
 - 0 The different risk appetites and risk profiles of firms; and/or
 - o The different waivers and modifications granted by the FCA.

1. Overview

1.1 Background and scope

The CRD IV package is the latest regulatory framework across the European Union governing the management of risks and capital requirements for banks and investment firms.

The objective of CRD IV is to promote the safety and soundness of the financial system by requiring banks and investment firms to hold a level of capital appropriate to the risks inherent in their business model. CRR disclosure requirements ("Pillar 3") aim to complement the minimum capital requirements ("Pillar 1") and the supervisory review and evaluation process ("Pillar 2").

The Pillar 3 disclosures herein have been prepared in accordance with the disclosure requirements of CRR. These requirements are designed to promote market discipline by providing market participants with key information on the Group's risk exposures, risk management processes and, hence, capital adequacy. Improved public disclosures of such information leads to increased transparency and should lead directly to more effective market discipline.

Article 432 of the CRR allows the Group to omit any of the required disclosures that are deemed to be immaterial in that such an omission would not change the understanding of a reader relying on this information. In addition, the Group may omit any disclosures where it believes that the information is proprietary or confidential. Information is deemed to be proprietary where we consider that, if shared, it would undermine our competitive position. Information is deemed to be confidential where there are obligations binding us to confidentiality with our counterparties and suppliers.

The Group has not omitted any disclosures on the grounds of being proprietary and/or confidential information.

1.2 Basis of Disclosure

The CRD IV disclosure requirements apply to CM-UK on a consolidated basis, consequently the disclosures below are presented on a consolidated basis. Unless otherwise stated all figures in this document are denominated in millions of United States dollars and are as at 31 March 2021 (and 31 March 2020 where comparative figures are provided).

All the members within CM-UK are fully consolidated in the Group and there are no differences in the basis of consolidation for accounting and prudential purposes.

The Group does not have any significant subsidiaries (as defined under CRR Article 13 (1) (2nd paragraph) that require additional disclosures on an individual or sub-consolidated basis.

1.3 Frequency of Disclosure

After due consideration of the size and complexity of the operations, the Group has determined that this disclosure document will be formally updated on an annual basis, to reflect the situation as at the end of each financial year. However, the Group may decide to publish some or all disclosures more frequently than annually if there are future changes in the business that are deemed to be material by the Group's Board of Directors.

1.4 Location and Verification

This Disclosure Document has been reviewed and approved by the Group's Board of Directors but has not been subject to external audit. However, where data is equivalent to that included in the Annual Report and Financial Statements, such data has been subject to external audit during the formal review and verification process of the financial statements.

This report is published on the corporate website of SMBC Nikko Capital Markets Limited <u>http://www.smbcnikko-cm.com/corporate/financial-information.html</u>

1.5 Key Metrics

The key metrics dashboard provides a summary of the Group. Supplementary information can be found in the table references provided:

12	Leverage ratio (%)	Section 9 - Table 19	10.2%	12.0%

2. Corporate Structure and business activities

2.1 Corporate structure

The Group is an investment business with derivatives and securities including business advisory divisions. It is part of a wider Sumitomo Mitsui Financial Group ("SMBC Group").

The Group consolidates the following legal entities:

- SMBC Nikko Capital Markets Limited ("the Company" or "CM Ltd"), company number 02418137 incorporated in England and Wales, a full scope investment firm authorised and regulated by the FCA. Sumitomo Mitsui BankingCorporation ("SMBC") of Japan is the majority sharehold er and controller.
- SMBC Derivative Products Limited ("SMBC DP"), a wholly owned subsidiary of CM Ltd and a full scope investment firm incorporated in England and Wales, authorised and regulated by the FCA. It is structured as a bankruptcy remote derivative products company ("DPC") and has received a credit rating of Aa1 from Moody's Investors Service Inc. ("Moody's") and AA- from Standard & Poor's Ratings Group ("S&P"). SMBC DP's principal activities are the provision of interest rate and foreign exchange risk hedging products to customers seeking a highly rated counterparty and the provision, for a fee, of performance guarantees of its affiliates.
- SMBC Capital Markets (Asia) Limited ("CM Asia"), incorporated in Hong Kong and authorised and regulated by the Hong Kong Securities and Futures Commission. CM Asia acts as an agent and intermediary for the Company and its affiliated entities in the Asian markets outside of Japan and in Australia.

2.2 Business model and strategy

The Group's business model is to provide customer focused investment banking services including securities and derivatives products and corporate advisory services to investors and customers, including on behalf of SMBC Group.

The Group's strategy is focussed on strengthening its global product offering to meet the needs of its customers and continue to build long term sustainable growth through a strategic plan which recognises the Company's responsibility to a broad range of stakeholders including shareholders, customers, employees and society.

The Group is organised as two divisions, the Global Markets and Capital Markets & Advisory divisions. Global Markets comprises of the Derivatives, Fixed Income and Equities business lines, whereas Capital Markets & Advisory comprises the Debt Capital Markets ('DCM'), Equity Capital Markets ('ECM') and M&A desks.

The Fixed Income and Equities desks within Global Markets undertake secondary market trading in bonds and equities, focused on customer facilitation and maximising order flow. The Group's repo and securities lending activities are predominantly undertaken for customer facilitation purposes rather than a source of funding.

The Derivatives desk provides largely vanilla derivative hedging products to meet the needs of its customers, including those customers of affiliated entities in the SMBC Group.

The DCM and ECM teams within Capital Markets & Advisory provide expertise in underwriting of primary issuance, while the M&A advisory group provides advice and support to SMBC Group customers seeking new business opportunities.

2.3 Business Environment

The Group operates in a highly regulated business environment with significant requirements in respect of reporting, capital and liquidity management, product design, conduct, customer service and other business aspects from multiple regulators in the countries the Group operates. These regulations constantly change and evolve in response to periods of financial instability, new business practices, economic and political developments and become increasingly stringent in order to promote good practice and stability in global financial markets.

SMBG

SMBC NIKKO

The Group operates in an environment of unprecedented uncertainty with respect to the continuing crisis presented by the COVID-19 pandemic and the fallout from the UK's withdrawal from the EU ("Brexit"). The Group's strategic plan, which incorporates the challenges and opportunities presented by Brexit and the Group's response to the COVID-19 crisis are discussed in the Group's Annual Report and Financial Statements.

2.4 Diversity

The SMBC Group is committed to diversity and inclusion because it recognises that diversity of people, opinions and perspectives is both good for business and strengthens our workplace culture. There are a number of initiatives across the group to support the development of diversity and inclusion for example DRIVE in EMEA and THRIVE in the USA.

In Japan, Nikko have launched the "With Us" female networking program along with a mentoring scheme and Welcome Back Policy aimed at helping women return to work. SMBCEMEA (including CM Ltd) has signed the HM Treasury, Women in Finance Charter, pledging to increase female representation to 30% at senior levels in the group by 2023 The President and CEO of CM Ltd is the accountable executive for the Women in Finance Charter.

The Board acknowledge the benefits of greater diversity, including gender diversity and is committed to an aspirational target of 25% for the proportion of female members of the board by 2022. To facilitate this, the Company has adopted the following policies in recruiting senior executives:

- engaging, when required, an executive search firm that is a signatory to WiFC or the Executive Search Firms' • Voluntary Code of Conduct;
- liaising with the search firm to produce a brief that includes emphasis on diversity of skills and background, in • addition to career experience and compatibility with the values and behaviours of existing board members, with a view to enhancing the overall effectiveness of the Board;
- encouraging the search firm to produce long lists which include female and other diverse candidates and; •
- considering female and other diverse senior executives, who may not have previous board experience in • executive and non-executive directorship roles, subject to the requirements for potential candidates to meet regulatory requirements for a board director of a financial services firm.

3 Risk management objectives, policies and material risks

The Board ensures that risk management is embedded throughout the organisation by way of:

- a formal risk governance framework, with clear and well understood risk ownership, standards and policies,
- a strong risk culture, with personal accountability for decisions,
- the alignment of risk and business objectives through the integration of risk appetite into business planning and capital management,
- the alignment of remuneration within the risk framework and risk outcomes, and
- daily monitoring by an independent risk function.

Risk management is underpinned by SMBC's values driven culture.

3.1 Risk Management Framework

The Board has established an Enterprise Wide Risk Management Policy that sets out the Group's objectives and defines a framework for how the risks it faces are managed. The framework covers governance arrangements, roles and responsibilities, risk appetites and limits and the processes and reporting that are in place across the Group. It is designed to achieve and assure effective risk governance and management across all business activities.

The Framework covers seven key components, which in summary are the following:

- Risk Governance Structure who is responsible for the Group's risk management and what authorities are given,
- Risk Identification and Assessment what risks the Group is faced by and how important each risk is,
- Risk Appetite what level of risk for each risk type and on an aggregate basis the Group is prepared to take in the pursuit of strategic objectives of the Group,
- Risk Measurement how risks are individually and collectively measured and recognised,
- Risk Monitoring and Reporting how risks are monitored, controlled and reported to the Board, executive management and business owners,
- Stress Testing Scenario analysis of potential downside risks, and
- Capital, liquidity and funding Planning and Management how the Group's capital and liquidity resources should be managed.

3.2 Risk Governance

The Group recognises that well-defined and transparent risk governance arrangements are imperative to ensure effective overall management and oversight of risk management.

The Board retains all decision making powers, though it has delegated some of these to either committees or individuals.

The Group's risk management governance arrangements are comprised of:

- A Committee structure to oversee and manage the risks of the Group,
- An organisational structure that utilises a "Three Lines Of Defence" model for the management of risks with clearly established responsibilities for the various Lines of Defence, and
- A policy framework that defines the mandatory minimum requirements for the management of risks across the Group.

3.3 Risk Management Committee Structure

3.3.1 The Board Risk and Compliance Committee ("BRCC")

The BRCC is responsible for assisting the Board in its oversight of risk, reviewing the Company's risk appetite and risk profile, reviewing the effectiveness of the risk management framework, reviewing the methodology used in determining the Company's capital requirements, stress testing, ensuring due diligence appraisals are carried out on strategic or significant transactions, working with the Remuneration Committee to ensure that risk is properly considered in setting remuneration policy and monitoring regulatory requirements. The BRCC is supported by and oversees the work of the Prudential Regulation Committee.

The BRCC members include independent non-executive directors and meets at least quarterly.

3.3.2 **The Nominations Committee**

The Nominations Committee is constituted of non-executive directors and is responsible for the recruitment, recommendation and the annual assessment of the skills, knowledge, experience and capabilities of candidates of the Board, and to senior management positions within the Group.

The Nominations Committee is responsible for selecting candidates for the Board and senior management positions within the Group. The selection is based on competency-based interviews that would assess the candidates' actual knowledge, skills and abilities that the Committee consider to be relevant for the appointment. The Committee shall recommend successful candidates to the Board for the approval as part of the Company's governance process.

The Nominations Committee also has the responsibility to review on an annual basis the size and composition of the Board. Such a review will cover those areas that the Nominations Committee determines are relevant and shall include skills, knowledge, experience and diversity of the Board. The Nominations Committee shall provide the Board with outcomes of each review, including the review of the operation of its diversity policies, and where appropriate make recommendations for changes or areas for further development by the Board.

3.3.3 The Remuneration Committee

The Remuneration Committee consists entirely of NEDs and has oversight for the operation of remuneration policies across CM-UK. It is also responsible for the review, approval and challenge where appropriate of remuneration proposals for members of senior management (including Executive Committee members) and other employees and Directors who are considered to have a material risk impact on us.

3.3.4 **The Audit Committee**

The Audit Committee is responsible for assisting the Board in i) its oversight and monitoring of the integrity of our financial statements and internal financial controls ii) monitoring and reviewing the effectiveness of the internal audit function. It is chaired by an independent non-executive director.

3.3.5 **The Executive Committee**

The Board delegates day-to-day management of the Group to the CEO who is further supported by a management committee framework including the following committees:

- an Executive Committee;
- a management risk committee (the Risk Management Steering Committee, "RMSC") and its sub-committees.

The Executive Committee supports the CEO in his responsibility to implement the strategic vision of the Board and to manage the daily operations of the Group. The Executive Committee oversees the operation of the RMSC.

3.3.6 The RMSC and sub-committees

The RMSC and associated RMSC sub-committees are responsible for assisting the Board in the oversight of its i) risk governance structure; ii) risk management and risk assessment processes; iii) risk appetite and tolerance; iv) capital, liquidity and funding; v) compliance with all applicable laws and regulations; vi) systems risk management and vi) internal controls.

The RMSC sub-committees can be summarised as follows:

- Credit Committee is responsible for reviewing and monitoring credit risk exposure vs. agreed internal limits, as well as risk appetite. Other areas, e.g. analysis of problem credits or portfolio concentrations, are also considered.
- Operational Risk Committee is a specialist forum structured to look more closely at, inter alia, risk events, losses and associated trends, escalated Key Risk Indicators ("KRIs") and Key Performance Indicators ("KPIs"), overdue actions and remedial steps, as well as wider themes around Third Party Vendor Management and, as relevant, Information Security.
- Liquidity Management Committee focuses on issues related to liquidity risk and treasury management, eg. liquidity stress testing, funds transfer pricing and efficiency of liquid asset buffer.

The Transaction Approval and New Product Committees convene to review new business which could potentially be considered to be outside of the norm, e.g. due to size, specific risk considerations (e.g. liquidity or credit) or if there are reputational considerations.

3.3.7 The Prudential Regulation Committee ("PRC")

The PRC is a sub-committee of the BRCC, which provides additional oversight of important processes within the firm such as the Internal Capital Adequacy Assessment Process ("ICAAP"), Internal Liquidity Adequacy Assessment ("ILAA"), Recovery and Resolution Plans ("RRP") and Solvent Wind Down Plans ("SWDP"). The Committee meets to review and challenge metrics, models and results related to risk management and valuation, as well the accuracy of regulatory returns (such as COREP & FSA 047/048) and interpretation of relevant rules and guidelines (e.g. CRR / BIPRU/IFPRU).

3.4 Directorships

The below table shows our directors and the number of both internal and external directorships they each serve as at 31 March 2021:

CM LTD Director	Internal directorships	External directorships
Patricia Jackson (INED)	0	2
Stephen Souchon (INED)	0	1
Maria Turner (INED)	0	0
Keiichiro Nakamura (NED)	3	2
Hitoshi Minami (NED)	6	0
Hideo Kawafune (NED)	4	0
Takahiro Yazawa (ED)	2	0
Antony Yates (ED)	5	0

Key:

ED = Executive Director

NED = Non-Executive Director

INED - Independent Non-Executive Director

The following directors resigned during 1st April 2020 and 31st March 2021

- Tetsuro Imaeda
- David John Thomas

All internal directorships are appointments within the SMBC Group.

3.5 Three Lines of Defence ("3LOD")

The Group has adopted a 3LOD approach to risk management to ensure the adequate oversight of risks and to embed a culture of risk awareness throughout the organisation. This approach separates the ownership/management of risk from the functions that oversee risk and those that provide independent assurance, as illustrated below:

3.5.1 **First Line of Defence**

Each business function, and its respective head, is required to ensure that all business decisions maintain an appropriate balance between risk and return and are in accordance with the Group's objectives and risk appetite. The business functions constitute the first line of defence ("1st LOD") and are responsible for identifying and managing risks directly and are accountable for both upside and downside outcomes. Each business function undertakes a regular risk self-assessment that is presented for executive management scrutiny.

The 1st LOD originates proposals for business opportunities, makes decisions relating to pricing, and, following relevant approvals and executes business activity. It includes direct support such as IT, operations, marketing and product development.

Risk management is a crucial element of everyday activity in the 1st LOD. The first line has the responsibility to:

- Prevent the risk that the Group is not prepared to own through forward looking risk identification
- Mitigate identified risks by proactive business management and report new / emerging risks when identified
- Conduct primary monitoring of risk controls

The 1st LOD executes these responsibilities within the constraints, limits, and policies determined by the 2nd Line of Defence.

3.5.2 Second Line of Defence

The 2nd Line of Defence is organisationally independent from the 1st LOD. The 2nd LOD provides oversight, guidance, and approval as well as advising, facilitating, and challenging the first line in their risk management activities and risk-return considerations.

A number of functions collectively form the 2nd LOD of the Group:

- Risk Management Department (covering market, credit, counterparty, liquidity and operational risks),
- Compliance Department (covering conduct and compliance risks),
- Finance, and
- Legal (covering legal and reputational risks).

The mission of the 2nd Line of Defence is to ensure financial stability and continuity of the Group, by acting as guardian of its risk profile. The 2nd LOD ensures the correct execution of risk management that satisfies all applicable laws, regulations, and best practice. To that end, 2nd LOD responsibilities are:

- To design an appropriate and effective risk and policy framework,
- To ensure the 1st LOD has implemented an effective risk management framework,
- To implement controls which enforce compliance with the Board's stated risk appetite and provide appropriate reporting,
- To identify and highlight current and emerging risk issues, and
- To monitor compliance with applicable laws and regulations.

3.5.3 Third Line of Defence

The Internal Audit department constitutes the third line of defence ("3rd LOD") and provides independent assurance to the Board that the 1st and 2nd LOD's are fit for purpose and that the risk-based information provided to the Board and management is accurate and reliable.

The 3rd LOD assesses the design, quality and the effectiveness of the identification, measurement, monitoring and reporting of risks and their corresponding controls by the 1st and 2nd LODs. The 3rd LOD responsibilities are to:

- Provide independent review of adherence to controls, policies, rules, and regulations by the first two lines
- Assess the efficiency and effectiveness of the risk identification, measurement and monitoring processes performed by the 1st LOD and 2nd LOD
- Assess the efficiency and effectiveness of the design and operation of internal controls
- Recommend and track remedial action where operational weaknesses are identified

3.6 Risk Identification and Assessment

The Group identifies and assesses risk based on the following principles, objectives and processes:

3.6.1 Key Principles and Objectives

The key principles for effective risk identification and assessment are:

- To identify the major risks that could impact the Group's long term sustainability,
- To assess the likelihood and impact of the risks materialising,
- To assess the robustness of the controls that mitigate the risks, and
- To ensure that identified risks are recorded on the Group's risk register.

The main objectives of the risk identification and assessment are:

- To help the Board with understanding the nature and size of the risks that the Group faces,
- To determine adequate capital and liquidity requirements on a forward looking horizon through ICAAP, ILAA and RRP processes,
- To ensure effective controls are implemented and maintained, and
- To help the executive management with day-to-day decision making in the Group's business so such decisions will be in line with the strategic objectives and the risk appetite of the Group.

3.6.2 Required Processes

The Group has a number of processes to ensure its risks are correctly identified and properly assessed, which include, but are not limited to:

- A risk identification process, which is on-going but also formally reviewed during the ICAAP process, through assessment and challenge of the Group's risk register and then presented to the BRCC for challenge, review and approval.
- An emerging risk identification process where contemporary and developing risks are identified, their potential impact evaluated, and mitigation actions are contemplated and reviewed and then presented to the BRCC for challenge, review and approval.

3.6.3 **Responsibilities**

The Risk Management Department is responsible for identifying such risks and preparing the explanation and assessment of such risks. The First Line of Defence must also continually seek to identify and assess the risks within its business activities.

3.7 Risk Appetite

Based on the risks that have been identified and assessed, the Board considers and sets out the Group's Risk Appetite in the context of the Group's strategic objectives. This is reviewed at minimum on an annual basis or in the event of a material change to the nature or size of risk faced by us.

The Group's Risk Appetite Framework sets out the broad level of risks that are to be accepted in pursuit of its business goals and strategy. Underpinning this framework, day-to-day business activities are managed using appropriate measures, risk targets and limits, which are to be considered as defining acceptable levels of each category of risk under normal conditions and are set out within the specific policies and procedures in place across the organisation. A comprehensive risk assessment process is undertaken annually and fully documented in the Group's ICAAP.

The Board-approved risk appetite statement sets out a series of metrics that are monitored through a risk appetite dashboard. This dashboard addresses a series of risk categories:

- Solvency,
- Liquidity,
- Credit and concentration risk,
- Market risk,
- Operational risk,
- Conduct, compliance and reputational risk, and
- Earnings.

The current status of the Group's risk appetite metrics is reported to the appropriate management committees on a monthly basis and to the BRCC quarterly. These results are displayed alongside the trigger and thresholds established by the Board. Defined procedures are set out for the escalation of any breaches of risk appetite to senior management and the Board.

As at 31 March 2020, the Group's risk exposures were within risk tolerance.

3.8 Material risks

A comprehensive risk assessment process is undertaken annually and is fully documented in the Group's ICAAP. From the ICAAP, our material risks are identified as below which the Group has allocated appropriate capital against:

3.8.1 Credit risk

We define credit risk as the risk of economic loss resulting from the failure of an obligor to perform in accordance with the terms and conditions of a contract or agreement, as a result of credit events such as deterioration of a borrowers' financial standing. The key drivers of credit risk are outlined as follows.

Counterparty risk is the risk of a counterparty failing to perform on a contract or agreement during the life of the transaction. Counterparty risk most often arises when we enter into a swap transaction, purchases an option or buy/sell securities with a forward settlement date including under repo/reverse repo and stock lending/borrowing agreements.

Issuer risk is the risk of credit quality deterioration or outright default (i.e. non-payment of coupon and/or principal on the due date) of an issue of securities. Issuer risk arises when we underwrite a new issue of securities or purchases securities in the secondary market.

Depository risk is the risk of failure by a depository or custodian holding our cash or securities. We may be required to deliver margin in the form of cash or other collateral for various types of business. Margin is deposited with clearing brokers for listed futures and options and some OTC transactions as well as directly with exchanges and/or their associated clearing houses.

Settlement Risk is the risk that one party will fail to deliver the terms on a contract with another party at the time of settlement. It is therefore necessary to manage credit by establishing settlement limits in accordance with the counterparty's credibility.

Transfer risk is defined as the risk that a borrower will not be able to convert local currency into foreign exchange and so will be unable to make debt service payments in foreign currency. The risk arises from exchange restrictions imposed by the government in the borrower's country.

Residual risk is the risk that the risk measurement and mitigation techniques employed prove less effective than expected.

The Group monitors credit risk against conservative limits to ensure the stability of the overall portfolio. These monitoring measures include:

- Current exposure (the positive mark to market / replacement cost value of derivative contracts),
- Potential exposure (the amount over the remaining life of a derivative transaction that a counterparty could potentially have to pay in order to close out a transaction or portfolio of transactions at some future time we use credit exposure at selected points in time over the life of the transaction at the 97.5% confidence level to define potential exposure),
- Expected exposure (the average of positive future values of derivative contracts for each scenario generated by an internal simulation model for each simulated time point over the life of the deal or portfolio),
- Average expected exposure (the sum of the Expected Exposure number of all-time points, divided by the life of the deal, or the maximum tenor of the portfolio),
- Expected loss (the cumulative sum of each time point's Expected Exposure multiplied by that time point's incremental loss probability), and
- Notional amount (for securities transactions, the aggregate Notional Amount is calculated as the sum of the face value of the securities bought/sold or borrowed/lent).

Credit risk mitigation is also a high priority for the Group's credit risk management and a variety of mitigants are employed including:

- Collateral and netting agreements, which are actively pursued from the standpoint of both credit and liquidity risks. Collateral is predominantly in the form of cash, mainly in major currencies. Securities collateral is limited to high grade government bonds.
- Parental guarantees, which the Group have purchased to cover specifically identified counterparty credit risks.
- Strict credit control procedures and limits monitoring, which ensure that all front office staff incorporates a comprehensive credit assessment in their approach to pricing.

3.8.2 Market risk

Market Risk is the risk of financial loss or reduced valuation to the Group's financial position arising from adverse market movements in interest rates, foreign exchange rates, credit spreads, equity prices and their associated volatilities, and other market risk factors.

The Group has strict market risk limits for its derivative business which is predominantly undertaken on the basis that the market risk arising from customer trades is hedged either with a group company CM Inc., or a market counterparty, which substantially mitigates market risk in the derivatives business.

Market risk arises in both the primary underwriting activity and the secondary securities held for market making purposes. It is mitigated through the monitoring and enforcing of a variety of measures such as position limits, sensitivity based measures, VaR and stress testing, and management of inventory holding periods. Market risk limits are reviewed regularly and are approved annually by the board and are set out in an official Risk Appetite Statement.

The VaR analysis for the year was as follows

Category	Year to March 2021(US\$m)	Year to March 2020(US\$m)
Year-end	3.1	2.3
Average	2.5	2
Maximum	3.2	2.4
Minimum	1.4	1.6

Note: The VaR table above is based on a 99% 1 day VaR over a 520 day cycle.

3.8.3 Securitisation

The Group has commenced its secondary trading activities on Asset Backed Securities ("ABS") and Residential Mortgage Based Securities ("RMBS") during the year, the main objectives of which are to

- support the Group's underwriting primary issuance activities; and
- strengthen its distribution capability to support customers' demands

The Group acts only as an investor in securitisation transactions and undertakes due diligence checks prior to taking on any securitisation positions. Market risk arising from holding such positions is monitored and mitigated through a variety of measures as outlined in section 3.8.2 above on Market Risk.

	31 March 2021 (US\$m)			
Category	Traditional		Sub-total	
	STS	Non-STS		
Institution acts as investor				
Retail (total)	13.1	13.4	26.5	
residential mortgage	8.9	2.6	11.6	
credit card	-	-	-	
other retail exposures	4.2	10.8	14.9	
Total Exposures	13.1	13.4	26.5	

Securitasion exposure in the trading book for CM-UK:

Note: STS stands for 'Simple, Transparent and Standardised' securitisation as defined under Regulation (EU) 2017/2402.

3.8.4 **Concentration risk**

Concentration risk is the risk of losses arising as a result of concentrations of exposures amongst individual counterparties, economic sectors or geographical regions due to imperfect portfolio diversification.

In the specific context of the Group's business, concentration risk may arise through exposures to groups of connected clients and/or to specific market sectors or geographical locations. Such exposure may arise from counterparty credit risk from derivative transactions and securities financing transactions, as well as issuer risk from the securities business.

Credit risk mitigation techniques (as mentioned in 3.8.1 above) are employed to reduce concentration risk arising in these areas, mainly through the use of EMIR compliant CSA agreements and associated collateral. In addition, the Group receives cash collateral from SMBC under a guarantee framework to mitigate exposures from certain third party derivative counterparties.

The Group monitors concentration risk within its Risk Appetite and management information and proactively manages and limits its exposures to single names, sectors, and regions.

Further, and in accordance with the requirements of large exposure monitoring, we have established a framework for monitoring aggregate exposures arising from 'connected counterparties', i.e. individual exposures that may be linked via a common economic or structural dependence. Credit exposures are assessed on an ongoing basis in order to identify and report any such linkages where required.

3.8.5 **Operational risk**

Operational risk is the risk of loss resulting from inadequate or failed internal processes, people and systems, or from external events. Broadly, the definition excludes Strategic and Reputational risk, but does include risks from the wider regulatory environment including Legal, Compliance and Conduct factors (see more details in section 3.10 below). Overall, such Regulatory Risk, a significant factor for authorised and regulated firms, encapsulates the risk of non-compliance to existing regulations and that of changes to applicable regulations or laws having an adverse impact on the business.

In applying this broad definition to its operations, the Group monitors Operational Risk on an ongoing basis and within its Risk Appetite, through the following core processes:

- Operational Risk Event reporting;
- Key Risk Indicator reporting;
- Risk and Control Self-Assessments, and;
- Ongoing regulatory reporting and compliance monitoring

Collectively, such processes help identify Operational Risk Events impacting the Group, and the remedial or mitigating actions required. These in turn help build a residual risk profile that is reviewed in monthly governance forums and represented in the Group's Risk Register. The events also provide loss data and scenarios for the annual ICAAP process, under the governance of the internal Prudential Regulation Committee.

The Group seeks to maintain operational resilience and minimise operational risk through clearly defined responsibilities for management and staff, comprehensive daily risk reporting and regular self-assessment of the operational framework to identify any control weaknesses covering front office, credit, risk management, settlements, finance, compliance, legal and systems functions.

Internal processes and controls are subject to regular verification by the internal audit function, reporting to the Board, which has full discretion over the particular processes and controls it chooses to review and the timing of any review.

3.8.6 **Pension obligation risk**

This is the risk to a firm caused by its contractual or other liabilities to or with respect to a pension scheme. We capitalise the gross value of the scheme's liabilities, which are not deemed a material risk.

3.8.7 Other risks

The Group's Risk Register also analyses risks for which capitalisation is not considered to be an appropriate mitigant.

• Group Risk

As noted in Section 2, our business model brings about an inherent interdependence with the wider SMBC Group, thereby leading to the potential for Group Risk.

Group risk represents the possibility that the financial position of the firm may be adversely affected by its relationships (financial or non-financial) with other entities in the wider SMBC group or by risk which may affect the financial position of the whole group including reputational contagion.

SMBC group exposures are therefore explicitly analysed & stress tested in both the counterparty credit risk and concentration risk calculations contained within the Group's ICAAP document.

As with concentration risk, the firm receives independent amount collateral from SMBC to offset the credit exposure arising from derivative trading with SMBC. This is provided in the form of Japanese Government Bonds, subject to haircut for FX volatility.

• Liquidity Risk

Liquidity risk is the risk of loss or damage to the Group as a result of being unable to meet obligations when they fall due without incurring material costs in realising liquid assets. Liquidity risk arises primarily from the requirement to fund securities balances and collateral calls on derivatives contracts.

Liquidity risk is mitigated by holding cash and highly liquid securities, including a buffer of high quality, unencumbered assets, to cover any unexpected cash outflows. The Group measures and maintains liquidity ratios in accordance with the Individual Liquidity Guidance set by the FCA and the Group's Risk Appetite.

The Group monitors expected cash flows on its assets and liabilities to identify and address any funding gaps that may arise in the future. The funding requirements are met from its own resources, borrowing from its parent company and, occasionally, through repo market transactions. Potential funding risk is mitigated by a policy of holding significant positions in high quality marketable securities that may be sold to cover any funding gaps. For stress testing purposes, reliance is placed only on a committed facility provided by SMBC.

Collateral requirements in the event of a rating downgrade

We do not have a public rating, however, in the event of a credit downgrade in the public rating of either SMBC or of the publicly rated, bankruptcy remote subsidiary SMBC DP there will be the potential for various liquidity events such as collateral calls or terminations upon downgrade in respect of certain derivative transactions with external clients. We therefore continuously monitor this position in the liquidity stress testing. Stress testing results indicates that we have sufficient available liquidity resources to manage the cash requirements which may arise in such a situation.

• Other non-financial risks

The Group considers other potential risk impacts such as reputational and others which it manages within the overall policy framework.

• Wrong way risk

٠

This is the risk that an exposure increases as the probability of the counterparty failure increases. A counterparty default typically coincides with increased exposure to that counterparty which subsequently results in increased losses. Wrong way risk can be caused by trade specific (idiosyncratic) or market general (systemic) reasons. Specific wrong way risk arises through poorly structured transactions, i.e. trades collateralized by own or related party shares. General wrong way risk arises where the credit quality of the counterparty may be correlated with a macroeconomic factor that also affects the value of the derivative transactions.

We have a strong preference to collateralise transactions with (normally US dollar) cash, but potentially may take government debt as collateral. Wrong way risk is mitigated to a large extent given preference for cash collateral or high grade government bonds, while wrong way risk in stressed market conditions is considered in the context of Pillar 2a counterparty credit risk requirement.

• Interest Rate Risk in the Banking Book (IRRBB)

The Treasury department manages the Group's funding profile, daily business funding and the liquidity asset buffer. The Group's exposure to IRRBB arises from Treasury's funding activities. The Group invests its capital in cash deposits, treasury bills, and a portfolio of high quality floating rate notes; through the latter it seeks to earn an interest margin. In addition, the Group places cash collateral with derivative trading counterparts, upon which it earns overnight interest. The Group has interest-bearing liabilities of cash collateral held on behalf of derivative trading counterparts and inter-group borrowings.

• Macro-Economic Risks

Additionally the Group is exposed to macro-economic, geopolitical and other external business risks which include, but are not limited to, the uncertain economic environment, particularly in regards to an increasingly unstable geopolitical environment, and changes to the level and volatility of prices such as foreign exchange rates, credit spreads,

commodity, equity prices or interest rates. These risks are considered as part of the Group's ICAAP stress testing process.

• Climate change and Environmental, Social and Governance factors

The Company and the SMBC Group assign a high priority to environmental issues and such issues, in particular climate change, have been identified as one of the Company's emerging risks.

Climate change presents risks for the stability of the financial system and risks may manifest through economic losses, for example, from severe weather events (physical risks) and/or through the transition to a low carbon economy (transition risks). The Company is building on its existing risk management framework to strategically address climate change through four key components: analysis; education; policy; and strategy and opportunities.

The Group's environmental strategy is further described in the Strategic Report of the Annual Report and Financial Statements.

3.9 Adequacy of risk management arrangements

As part of its ongoing risk management framework, on at least an annual basis the Group undertakes an assessment of the level of capital and liquidity resources required to execute its business model within the boundaries of its risk appetite framework; these assessments form the basis of its ICAAP and ILAA documents. Further, contingency preparations are also maintained in respective of Recovery Planning and Solvent Wind Down planning.

This suite of documentation is provided to the Board who have assessed that the risk management framework implemented within the group is satisfactory and performing effectively. Further, these documents are also subject to independent review by both internal and external audit / consultancy firms, who have confirmed this assessment.

3.10 Conduct Risk

Conduct risk arises from any activity that the Group or its employees might engage in which would result in unfair treatment of the Group's customers or other stakeholders, breaches of conduct of business or financial crime rules or damage to market integrity or competition.

The Group's Conduct Framework is based around three pillars as outlined below.

3.10.1 Identification of Conduct Risks

- Each employee is responsible to identify Conduct Risks in his or her area
- Each Department Head must identify Conduct Risks for their area of responsibility
- The firm sets its conduct risk appetite as part of its Risk framework and maintains a Conduct Risk Register at firm and departmental level which is regularly reviewed and updated.

3.10.2 Monitoring and Reporting Conduct Risks

- Front and Back Offices conduct quarterly self-assessments
- The Compliance Department conducts its Compliance Monitoring Programme including Conduct related themes and review of conduct controls
- Conduct KRIs are reported to the Control and Conduct Assessment Forum and to the board and board committees
- The Employee Conduct Risk Committee reviews individual conduct issues and 'joins the dots'
- Speak-up and whistleblowing is encouraged and protected through our Whistleblowing framework.

- The Group has implemented the Senior Managers and Certification Regime including the Code of Conduct. The Group has provided training on the Code of Conduct and established a mechanism for identifying and reporting on Conduct breaches as required by SMCR
- Each Front and Back Office Department has appointed a conduct champion whose role is to promote the • conduct agenda in that department
- The Group has established annual Positive Conduct Awards to recognise good conduct by individual • employees.

3.10.3 Control of Conduct Risk

- The Group has a full Conduct Risk training curriculum
- Conduct issues are highlighted through regular Conduct Risk Updates to employees •
- New Product Approval Process and Transactional Approval Committee embed conduct issues •
- Departmental and firm wide Policies and Procedures also embed conduct themes
- Employee Conduct Risk Committee makes recommendations to the board remuneration committee on individual conduct related issues
- The Group's Culture programme seeks to embed its group wide values and enhance the Group's culture •

3.11 Upcoming Prudential Regulatory Changes

The FCA will introduce the UK Investment Firm Prudential Regime (IFPR), a new prudential regime for UK firms authorised under the Markets in Financial Instruments Directive (MiFID), on 1 January 2022, subject to progress and amendments to the Financial Services Bill (FS Bill), The new regime will streamline and simplify the prudential requirements for FCA solo-regulated investment firms in the UK (FCA investment firms). In line with FCA objectives and its Mission, it will refocus prudential requirements and expectations away from risks the firm faces, to also consider and look to mitigate the potential for harm the firm can pose to consumers and markets.

The Group has commenced its implementation of IFPR based on the draft rules in the FCA's consultation papers issued to date and will assess whether any changes are required to the risk management framework over the course of the coming financial year.

4. Own funds

4.1 Common Equity Tier 1 ("CET1") Capital

Our Common Equity Tier 1 capital is made up of \$779 million of fully paid-up ordinary share capital, \$165 million share premium, audited reserves and other reserves.

Ordinary shares carry voting rights and are owned by Sumitomo Mitsui Banking Corporation (85%) and SMBC Nikko Securities, Inc. (15%). Further details of the features of ordinary shares are in Table 1 and Appendix 1.

4.2 Additional Tier 1 Capital ("AT1")

AT1 Capital consists of \$360 million of perpetual, non-cumulative preference shares, fully paid-up and compliant with the eligibility criteria under the CRR. Further details of the features of AT1 are in Table 1 and Appendix 1.

4.3 Capital deductions

Our own funds are subject to the following deductions from CET1:

- Deduction of intangible assets
- Prudential filters, which include:
 - Reversal of the fair value reserves related to gains or losses on cash flow hedges on projected cash flows,
 - Reversal of the gain or losses on liabilities that result from changes in the own credit standing of the firm, and
 - 0 Application of the additional value adjustments.

Table 1: Summary of the own funds for CM-UK:

Own funds	31 March2021 (US\$m)	31 March2020 (US\$m)
Common Equity Tier 1 (CET1) capital: instruments and reserves		
Capital instruments and the related share premium accounts	944.0	944.0
- Ordinary shares	779.0	779.0
- Share Premium	165.0	165.0
Retained earnings	558.0	487.3
Accumulated other comprehensive income (and other reserves)	(1.6)	.0
Common equity tier 1 capital before regulatory adjustments	1,500.4	1,431.3
Common equity tier 1 capital: regulatory adjustments		
Additional value adjustments	(2.1)	(2.0)
Intangible assets (net of related tax liability)	(7.7)	(6.7)
Fair value reserves related to gains or losses on cash flow hedges Gains or losses on liabilities valued at fair value resulting from changes	0.0	(1.0)
in own credit standing	(13.8)	(27.0)
CET1 instruments of financial sectior entities where the institution has a significant investment in those entities	.0	.0
Total regulatory adjustments to common equity tier 1	.0 (23.7)	(36.7)
Common Equity Tier 1 (CET1) Capital	1,476.7	1,394.6
	.,	.,
Additional Tier 1 (AT1) capital: instruments		
Perpetual non-cumulative preference shares	360.0	360.0
Additional Tier 1 (AT1) capital before regulatory adjustments	360.0	360.0
Additional Tier 1 (AT1) capital: regulatory adjustments		
AT1 instruments of financial sectior entities where the institution has a	0	<u>^</u>
significant investment in those entities	.0	.0

	300.0	300.0
Total Own Funds	1,836.7	1,754.6

The increase in Total Own Funds is predominantly due to the inclusion of the audited profit for the period ended 31 March 2021 in CET1.

Category	31 March 2021 (US\$m)	31 March 2020 (US\$m)
Shareholders' equity per financial statements		
Called up share capital	1,139.0	1139
Share premium	165.0	165
Retained earnings	558.0	487.3
Other reserves	(1.6)	0.0
Less Regulatory Adjustments for Own Funds		
Capital Deductions	(23.7)	(36.7)
Total Own Funds	1,836.7	1,754.6

5. Capital Requirements

We determine the Pillar 1 capital requirements on a daily basis in accordance with the relevant CRR rules. A summary report, which includes a variance analysis and highlights points of note, is then distributed to the Group's key stakeholders, which consists of senior management, heads of businesses, risk management and finance.

Category	RWA (US\$m)	Capital Requirement (US\$m)	RWA (US\$m)	Capital Requirement (US\$m)
	31 Marc	ch 2021	31 Marc	:h 2020

Options transactions	-	-	-	-
Equity	-	-	140.4	11.2
Foreign exchange risk	237.6	19.0	216.4	17.3
Operational risk	481.8	38.5	475.0	38.0
Concentration Risk	-	-	-	-
Total	3,819.7	305.6	3,839.2	307.1

Table 3: Summary of RWA and Pillar 1 capital requirements by risk category for CM-UK:

Table 4: Capital Ratios for CM-UK:

Capital Ratios	31 March 2021	31 March 2020
Common Equity Tier 1 ratio	38.7%	36.3%
Tier 1 ratio	48.1%	45.7%
Total capital ratio	48.1%	45.7%

The Group's capital ratio has increased from 31 March 2020 to 31 March 2021, primarily as a result of the inclusion of the audited profits for the year ended 31 March 2021 in the own funds.

5.1 Pillar 1 approach

We adopt the following approaches to calculating Pillar 1 capital requirements:

Risk Category	Pillar 1 approach
Credit Risk	Standardised approach under Chapter 2, Title II, Part Three of CRR
Market Risk	
- Interest rate general market risk	Maturity-based approach under CRR Article 339
- Interest rate specific market risk	Standardised approach under CRR Article 336
- Securitisation specific market risk	External Ratings Based approach under Section 3, Chapter 5, Title II, Part Three of CRR*
- Foreign exchange risk	Standardised approach under CRR Article 352
Operational Risk	Basic Indicator Approach under Chapter 2, Title III, Part Three of CRR.
Credit Valuation Adjustment Risk	Standardised method under CRR Article 384
	Additional own funds requirements for large exposures in the trading book under Article
Concentration Risk	397
Settlement Risk	CRR Article 378

Note: as amended by the Regulation (EU) 2017/2401 effective from 1 January 2019.

5.2 Settlement risk

The credit risk RWA and Pillar 1 capital requirement in **Table 3** above includes settlement risk RWA and capital requirements, which were \$0.5m and \$0.037m respectively, as at 31 March 2021. These figures are not reflected in the Credit Risk Tables below.

6. Capital Buffers

The Group is required to hold the following capital buffers under CRD IV.

6.1 Capital conservation buffer ("CCoB")

The CCoB is designed to ensure that institutions build up capital buffers outside of times of stress that can be drawn upon if required. The requirement is 2.5% of RWA.

6.2 Countercyclical capital buffer ("CCyB")

The CCyB is designed to require financial institutions to hold additional capital to reduce the build-up of systemic risk in a credit boom by providing additional loss absorbing capacity and acting as an incentive to limit further credit growth.

Table 5: Institution-specific CCyB and requirement for CM-UK:

Category	(US\$m)	and %
Calegoly	31 March 2021	31 March 2020
Total risk exposure amount	3,819.7	3,839.2
Institution specific countercyclical capital buffer rate	0.014%	0.033%
Institution specific countercyclical capital buffer requirement	0.5	1.3

Table 6: Geographical distribution of credit exposures relevant for the calculation of the CCyB as at 31 March 2021 for CM-UK: table updated last two columns total removed.

7. Credit risk

7.1 Credit risk adjustments

The Group recognises an impairment allowance for expected credit losses for financial assets carried at amortised cost and fair value through other comprehensive income.

IFRS 9 establishes three impairment categories:

- a) low risk assets ("stage 1");
- b) instruments whose credit risk has significantly increased since initial recognition ("stage 2"); and
- c) credit-impaired ("stage 3").

Impairment provision of assets in stage 1 is measured for the 12-month future expected credit losses. Impairment provision for assets in stages 2 and 3 is calculated over the lifetime of the asset. IFRS 9 sets criteria for classification as low, significantly increased risk and credit-impaired. They include rebuttable presumptions of a significant increase in credit risk for instruments over 30 days in arrears and credit impairment for instruments over 90 days in arrears. At the reporting date, the Group had no assets in stages 2 or 3. Where the Group's assets in scope have a life span of less than 12 months, the impairment provision is calculated for the shorter of the asset lifetime and 12 months.

7.2 Fair value reserve

Fair value is the price to sell an asset or settle a liability (exit price) in an orderly transaction between market participants at the measurement date under current market conditions which takes place either: (a) in the *principal market* for the asset or liability; or (b) in the absence of a principal market, in the *most advantageous market* for the asset or liability. The Group makes adjustments to the valuation of their derivatives by calculating credit, debit and funding valuation adjustments consistent with IFRS 13.

7.3 Summary of Credit Risk Exposures for CM-UK

Original exposures are our exposures to counterparties after accounting offsets and without taking into account the effects of credit risk mitigation. For derivative exposures, we apply contractual netting under Section 7, Chapter 6, Title II, Part Three of CRR, to derive at the gross exposure values where the Group has netting agreements in place with counterparties that are legally valid and enforceable in the relevant jurisdictions. Please refer to Table 16 for further details on the effect of contractual netting for derivatives.

Table 7: Breakdown of credit risk original, average original, net exposures and RWA by exposure class for CM-UK:

		31 March 2021		
Exposure Class		(US\$m)		
	Original Exposure	Average Original exposure value	Net Exposure	RWA

Other	41.7	51.9	41.7	44.4					
Total	12,026.1	12,104.8	4,128.9	1,454.4					

The increase in original exposure to Institutions from March 2020 to March 2021 is mainly due to a rise in exposure to repo/reverse repo transactions.

The reason RWA is down is predominantly due to the application of the CCP look through method to the OTC derivative transactions cleared with LCH.

The Average Original exposure is calculated as the average original exposure of four reportable quarters from March 2020 to March 2021.

Table 13: Countries where CM-UK has exposure to and not separately disclosed in table 12

7.4 Net Exposure

The Group calculates net exposure based on original exposure and application of credit risk mitigation. We apply the rules under Chapter 4, Title II, Part Three of CRR to recognise the effect of credit risk mitigants that meet the eligibility criteria.

7.5 Use of External Credit Assessment Institutions ("ECAI") to derive client Risk Weight:

Under the standardised approach to credit risk, we use ECAI's external credit assessment to determine the risk weight to be applied to exposure amounts. This is performed via a mapping of external credit ratings to the associated credit quality step ("CQS") using the standard association published by the European Banking Authority ("EBA") as well as the clients' Exposure class and residual maturity of the transaction.

For this purpose, we use the following ECAI's:

- Moody's
- S&P
- Fitch

Table 14: CM-UK's Net Exposure by Exposure Class and associated Risk Weight applied:

7.6 Counterparty credit risk

Counterparty credit risk ("CCR") means the risk that the counterparty to a transaction could default before the final settlement of the transaction's cash flows. CCR is one of the most significant risks that the Group is exposed to. The following products are subject to CCR:

- Derivative contracts, and
- Securities financing transactions ("SFT").

CCR forms a significant portion of the Group's credit risk RWA. We calculate the exposure values of the contracts subject to CCR using the following approaches:

- Derivative contracts: 'Mark-to-Market Method' under CRR Article 274, and
- SFT: Financial Collateral Comprehensive Method under CRR Articles 223 & 224.

Table 15: Breakdown of credit risk exposures and RWA by product category for CM-UK:

Category	31 March 2021			
	RWAs (US\$m)	Original credit risk exposure (US\$m)	Net exposure (US\$m)	
CCR - Derivative contracts	1,093.0	5,018.0	2,766.7	
CCR - Securities financings contracts	25.8	6,220.5	128.8	
Credit Risk - Other	271.5	1,505.9	1,358.6	
Total	1,390.3	12,744.4	4,254.0	

Category	31 March 2020			
	RWAs (US\$m)	Original credit risk exposure (US\$m)	Net exposure (US\$m)	
CCR - Derivative contracts	1,120.3	4,688.1	2,377.2	
CCR - Securities financings contracts	24.3	5,370.5	121.1	
Credit Risk - Other	309.8	1,967.5	1,630.6	
Total	1,454.4	12,026.1	4,128.9	

Table 16: Breakdown of derivative counterparty credit risk exposures for CM-UK:

Colorony	31 March 2021	31 March 2020	
Category	(US\$m)	(US\$m)	
Gross positive fair value of contracts	10,808.4	14,406.5	
Netting benefits	(8,882.3)	(11,732.3)	
Net Current Credit Exposure	1,926.1	2,674.2	
Collateral held	(2,251.3)	(2,310.8)	
Potential future credit exposure	3,091.9	2,013.8	
Net Derivative Credit Exposure	2,766.7	2,377.2	

8. Market Risk

Table 17: CM-UK's RWA and Pillar 1 market risk capital requirements by risk type:

31 March 2021		
Outright products	RWA amounts (US\$m)	Capital requirements (US\$m)
Interest rate risk (general and specific)	1,464.5	117.2
- General market risk	758.2	60.7
- Specific market risk	706.3	56.5
Equity risk (general and specific)	-	-
- General market risk	-	-
- Specific market risk	-	-
Foreign exchange risk	237.6	19.0
Total	1,702.1	136.2

31 March 2020				
Outright products	RWA amounts (US\$m)	Capital requirements (US\$m)		
Interest rate risk (general and specific)	1,363.6	109.1		
- General market risk	473.7	37.9		
- Specific market risk	889.9	71.2		
Equity risk (general and specific)	140.4	11.2		
- General market risk	75.9	6.0		
- Specific market risk	64.5	5.2		
Foreign exchange risk	216.4	17.3		
Total	1,720.4	137.6		

Movement in Equity is due to transfer of CM Ltd.'s CB books, together with the respective hedge trades to CMBS Nikko Securities Inc. in November 2020 which offset by an increase in Interest Rate Risk due to rise in bond inventory.

9. Leverage

The purpose of monitoring and measuring this metric is to prevent the risk of a build-up of 'excessive' leverage. This is not a material risk to us.

9.1 Approach to leverage ratio exposures

We calculate the leverage ratio exposures based on accounting values of the assets on the balance sheet, except for the following:

- Leverage ratio exposures for derivative contracts: based on the exposure values calculated for CCR purposes
- Leverage ratio exposures for SFTs: a counterparty credit risk add-on (calculated under CRR Article 429b) is included in addition to the accounting values of the assets.

9.2 Approach to leverage ratio reporting

Point in time reporting: under Recital 9 of the Leverage Ratio Delegated Regulation, we monitor and report leverage ratio each quarter based on quarter-end data.

Table 18: Breakdown of the leverage ratio exposures for CM-UK:

Summary reconciliation of accounting assets and leverage ratio	Applicable amounts (US\$m)		
exposures	31 March 2021	31 March 2020	
Total assets as per published financial statements	18,834.0	20,769.2	
Adjustments for derivative financial instruments	(918.1) (6,2		
Adjustments for securities financing transactions	66.3		
Adjustment for off-balance sheet items (ie conversion to credit equivalent			
amounts of off-balance sheet exposures)	0	0	
Other adjustments	(28.9)	(41.7)	
Leverage ratio exposure	17,953.3	14,588.0	

The (\$29.3)m other adjustments relates to exposures already deducted from capital.

Table 19: Reconciliation of accounting assets and leverage ratio exposure for CM-UK:

31 March 2021		
Leverage ratio common disclosure	CRR leverage ratio exposures (US\$m)	
On-balance sheet exposures (excluding derivatives and SFTs)		
On-balance sheet exposures (excluding derivatives and SFTs, but including collateral)	6,075.4	
Asset amounts deducted in determining Tier 1 capital	(23.7)	
Total on-balance sheet exposures (excluding derivatives and SFTs, but including collateral	6,051.7	
Derivative exposures		
Replacement cost associated with derivatives transactions	4,133.4	
Add-on amounts for PFE associated with derivatives transactions	4,151.9	
Total derivative exposures	8,285.3	
Securities financing transaction exposures		
Gross SFT assets (with no recognition of netting)	3,550.0	
Add-on amount for counterparty credit risk exposure for SFT assets	66.3	
Total securities financing transaction exposures	3,616.3	
Capital and Total Exposures		
Tier 1 capital	1,836.7	
Total Exposures	17,953.3	
Leverage Ratios		
End of quarter leverage ratio	10.2%	
Choice on transitional arrangements and amount of derecognised fiduciary items		
Choice on transitional arrangements for the definition of the capital measure	0	
Amount of derecognised fiduciary items in accordance with Article 429(11) of Regulation (EU) NO. 575/2013	0	

Leverage ratio has reduced by 1.8% primarily due to an increase in regulatory derivative exposure.

10. Asset encumbrance

The Group determines encumbered assets and collateral in a manner consistent with the definition provided in the EBA Guidelines on the disclosure of encumbered assets. Assets are considered encumbered when they have been pledged or used to secure, collateralise or credit enhance a transaction which impacts their transferability and free use. The key sources of encumbrance are repurchase agreements, trading liabilities and derivative activities. Asset encumbrance is integral to the Group's business and funding model. The types of encumbered assets have remained consistent during the year.

The Group utilises standard collateral agreements and collateralises at appropriate levels based on industry standard contractual agreements.

There is no significant difference between treatment of encumbered assets reported below and treatment of pledged and transferred assets in accordance with accounting framework applied by us.

The reported values in the tables below represent the median of the values reported to the regulator over the period 1 April 2020 to 31 March 2021.

31 March 2021					
Category	Carrying amount of encumbered assets (US\$m)	Fair value of encumbered assets (US\$m)	Carrying amount of unencumbered assets (US\$m)	Fair value of unencumbered assets (US\$m)	
Assets of the reporting institution 3,248.2 106.5 18,059.9 1,463.1

Appendix 2: Remuneration disclosures

SMBC Nikko Capital Markets Limited ("CM-LTD") is subject to the FCA's Remuneration Code and is categorised as a Proportionality level 3 firm. In this document, SMBC Derivative Products Limited ("SMBC DP"), SMBC Capital Markets Asia Limited ("CM-Asia") and CM-LTD are referred to as CM-UK while SMBC DP, CM-LTD, CM-Asia and CM-INC are referred to as the Group. This section provides further information on CM-UK's remuneration policies and governance in addition to quantitative information on remuneration in respect of the 12 month period ending 31st March 2021 (FY20). CM LTD retains three Independent Non-Executives Directors (INEDs) on its Board who receive a fixed fee for their services

1. Remuneration Policy

Our Remuneration Policy ("Policy") sets out the policies and practices of remuneration for all our employees including international secondees from SMBC Nikko Capital Markets (Tokyo) and SMBC (Tokyo), and is intended to reflect our overall business philosophy, aims and objectives.

The FCA Remuneration Code ("the Code") applies to all our employees including its subsidiaries. SMBC Derivative Products Limited ("SMBC DP") currently has no employees and outsources all functions to other Group companies through an Agency Agreement and SLA's. SMBC DP retains three Independent Non-Executives Directors (INEDs) on its Board who receive a fixed fee for their services.

A continuing focus during FY 2020 has been to ensure that our approach to discretionary remuneration is structured in accordance with the Code.

Our Remuneration Policy is an expression of our overall philosophy, aims and objectives with regard to how we pay our employees.

It is our intention that:

- We comply in full with the FCA Remuneration Code (SYSC 19A), ensuring that our remuneration policy is risk-focussed and adopts remuneration policies which promote effective risk management and do not expose the business to excessive risk;
- 2) The Remuneration policy will support our long term aims. It will seek to encourage and support long term stability and sustainability, particularly of its capital base, and promote steady growth and keen risk awareness;
- 3) Decisions about remuneration policy will be reviewed, considered and approved/ratified by the RemCo;
- Employees are remunerated by means of the following elements basic salary, benefits including defined contribution pension, private medical insurance, life assurance and variable pay – that are relevant to their location and function;
- 5) The amount of fixed remuneration, including where appropriate; salary, allowances, or benefits, should be sufficient for an acceptable standard of living in any given location without a dependency on variable p ay; and
- 6) Employees have the opportunity to share in the success of the CM-UK in years of good performance and also accept diminished levels of variable pay in times of poor performance or losses.

Our policy is owned by the Remuneration Committee ("RemCo"), who will review the policy annually or more frequently if necessary. The RemCo has the authority to make significant revisions to the policy. Minor revisions may be made by the Head of Human Resources and approved by the CEO, with ratification by the RemCo.

The mandate of the RemCo includes, but is not limited to:

- Reviewing and recommending to the Board the approval of the Remuneration Policy
- Reviewing and approving current and deferred remuneration for specified Material Risk Takers
- Reviewing and approving the bonus fund cap calculation, including ex-ante and ex-post risk adjustments

2. Regulation

We are committed to the maintenance of robust remuneration arrangements that are in accordance with regulatory requirements including the Code.

Here are some of the ways in which the Group fulfils this commitment:

- a) Scope and Application We have a clear process to identify employees whose professional activities could have a significant impact on the firm's risk profile, including senior risk and compliance officers, in accordance with the FCA Remuneration Code. Such employees are designated as Material Risk Takers ("MRT") and they are made aware of the implications of their status;
- b) Governance We are categorised as a significant, Proportionality Level 3 firm. In line with FCA Proportionality guidelines, we have constituted a Remuneration Committee to strengthen remuneration governance. The committee is primarily responsible for ensuring our remuneration policies comply with the FCA Remuneration Code in addition to specific responsibilities for the approval of senior management compensation, review of MRT compensation, bonus pool funding and employee conduct outcomes. Human Resources will seek review of the Remuneration Policy Statement and this Pillar 3 Risk Disclosure from external consultants from time to time as deemed appropriate and necessary to confirm compliant approach to remuneration and the required disclosure. The last review of the documentation, approach and compliance was undertaken by PricewaterhouseCoopers (PwC) for the FY19 performance year.
- c) Capital The aggregate total of variable remuneration in FY 2020 was considered in the context of our overall capital resources;
- d) Guarantees Our policy is that guarantees are used only in exceptional circumstances, only in the case of new hires and only in their first 12 months of service;
- e) Risk-focused Remuneration Policies Our policies, procedures and practices promote sound risk management. This is an important part of our Policy which links risk and remuneration through the governance process, the performance evaluation process, deferral structures and performance adjustment provisions;
- f) We have a top down risk adjustment which is produced by the Risk Management department. This uses attributed direct costs and then incorporates a cost of capital to reflect capital usage. The process is used to quantify the efficiency of capital usage in driving profitability and to assess the appropriateness of the size of the bonus funds.
- g) We have voluntarily implemented a deferral scheme and a variable pay cap of 200% of fixed pay See Section
 6;
- h) We also adjust the bonus awards of employees if their behaviours are deemed to be incompatible with the organisation's values and culture.
- i) Conduct assessment is a key part in the assessment of non-financial performance for Departments.

3. Material Risk Takers

We have identified MRTs in accordance with Remuneration Code with reference to the EBA Regulatory Technical Standards (RTS) for the definition of material risk takers for remuneration purposes. We have developed and applied internal qualitative and quantitative assessments against the defined criteria to identify those individuals that have a material impact upon the firm's risk profile.

For the performance year 2021 there were 59 MRTs identified in CM-UK.

4. Control Functions

Employees engaged in Risk, Audit and Compliance functions are independent of the business units they oversee. Their remuneration, both fixed and variable, is determined centrally, with no involvement from front line business units in the process and is reviewed and approved by the Remuneration Committee. Remuneration for employees in control functions is predominantly fixed.

5. Base Salary

Base salary is the fixed payment made to an employee for their services. It does not include allowances or benefits and is the basis for salary-related benefits such as pension contributions.

The amount of salary paid to an employee will depend on the following factors:

a) The market rate for the function;

- b) The consistency of the market rate with internal peer groups;
- c) The knowledge, experience and competencies of the individual;

Base Salary is reviewed annually on 1 July.

Fixed remuneration comprises of base salary, allowances and benefits.

6. Variable Pay

We have defined variable pay as annual discretionary bonus, which is awarded based on SMBC results, CM Group results, departmental results and individual performance.

The total bonus pool amount is determined by reference to our risk-adjusted criteria, which include both quantitative and qualitative measures.

Individual discretionary bonuses are based on performance and non-performance based criteria. Adherence to applicable risk and control frameworks is part of the performance assessment.

All employees are eligible to be considered for a discretionary bonus award as long as they began their employment with the Group on or before the last day of March of the appropriate performance year. All awards for new joines are pro-rated based on their start date.

For FY 2020 the core performance criteria were:

Risk, Compliance and Conduct; Leadership, Customer Service and People Development; and Diversity and Inclusion.

In light of the Covid-19 economic challenges, the Prudential Regulatory Authority ("PRA") instructed institutions to take prudent decisions to safeguard their capital and maintain liquidity. In response to this, the Remuneration Committee approved a series of actions in response to the regulator's COVID-19 expectations.

7. Deferral and Performance Adjustment

As a Proportionality level 3 firm and in accordance with the Remuneration Code, we have dis-applied the requirement to make payment in shares, or equivalent non-cash instruments. We have voluntarily adopted a deferral policy upon which performance adjustment may be applied. MRTs are also subject to clawback provisions.

8. Remuneration of SMBC Nikko Capital Markets Limited in Performance Year 2020

Aggregate remuneration amount for MRTs:

Total remuneration (US\$m) 2020			
Senior Managers	Other members of staff designated as MRT	Total	
7.8	17.4	25.2	

NB the figures above are in respect of the financial period ending 31 March 2021 - including 12 months of fixed pay to 31 March 2021, and the bonus awards paid in June 2021 for the performance year FY 2020.
